Review

Slides from SOFT2201 by Bernhard Scholz

OO Principles

- Abstraction
- Polymorphism

 Assignment Project Exam Help
 - Inheritance

https://powcoder.com

Add WeChat powcoder

Abstract Classes

- Abstract Classes whose method implementations are deferred to sub-classes
- Important concept in ent Project Exam Help
- Requires own key word abstract action
- No instance of an abstract class can be generated
 Add WeChat powcoder

Interfaces

- Java has no multi-inheritance
 - Interface is a way-out (introduction of multi-inheritance via the back-door)
- Interfaces is A significant the project of the methods.
- Interfaces can inherit from other interfaces com
- Ensures that a class has a certain set of behavior
- Interfaces are specified softher they form a directed acyclic graph
- Methods declared in an interface are always public and abstract
- Variables are permitted if they are static and final only

Example: Interface

```
public interface A {
 int foo(int https://powcoder.com
// class X impAddtWieChatepowcoder
class X implements A {
 int foo(int x) {
   return x;
```

Example: Interface

Inheritance in interfaces

```
// definition of interface

public interface A {
  int foo(int https://powcoder.com
}

public interface A delewe Shat powcoder
  int hoo(int x);
}
```

Interface B has methods foo() and hoo()

Virtual Dispatch

- Methods in Java permit a late binding
- Reference variable and its type does not tell which method is really invoked Exam Help
- The type of reference variable and class instance may differ
- Class variables may override methods of super classes
- The method invoked is Weerhint Dby Medybe of the class instance
- Binding is of great importance to understand OO

Example: Virtual Dispatch

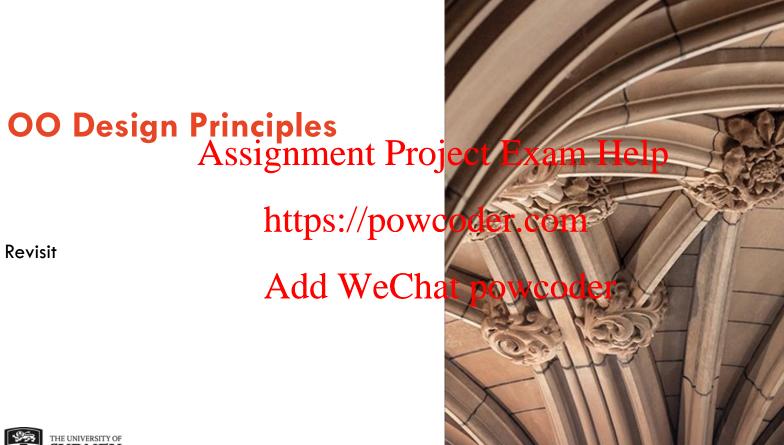

- Example:

```
public class Shape extends Object to double Assignment Project Exam Help
public class Rettphs://powcoder.com
  double area() { }
              Add WeChat powcoder
Shape X = \text{new Shape}();
Shape Y = new Rectangle();
double a1 = X.area() // invokes area of Shape
double a2 = Y.area() // invokes area of Rectangle
```

GRASP: Methodological Approach to OO Design

General **R**esponsibility **A**ssignment **S**oftware **P**atterns

The five basic principles:

Assignment Project Exam Help

- Creator
- Information Experts://powcoder.com
- High Cohesion Add WeChat powcoder
- Low Coupling
- Controller

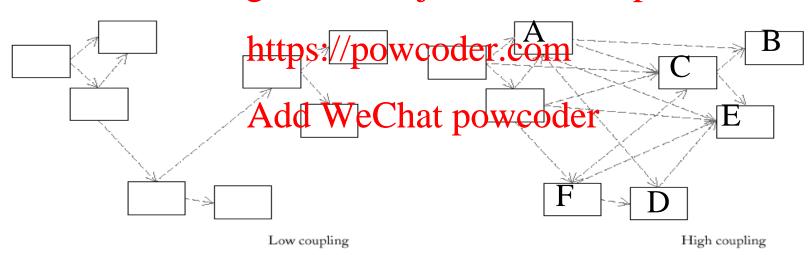

Dependency

- A dependency exists between two elements if changes to the definition of one element (the supplier) may cause changes to the other (the signment Project Exam Help
- Various reason for dependency oder.com

 - Class send message to another
 One class has another and powcoder
 - One class mention another as a parameter to an operation
 - One class is a superclass or interface of another

Coupling

- How strongly <u>one element</u> is connected to, has knowledge of, or depends on <u>other elements</u>
- Illustrated as dependency relationship in UML class diagram
 ASSIGNMENT Project Exam Help

GRASP: Low Coupling Principle

Problem

How to reduce the impact of change, to support low dependency, and increase reuse?

Assign a responsibility so that coupling remains low

https://powcoder.com

Add WeChat powcoder

Cohesion

- How strongly related and focused the responsibilities of <u>an</u>
 element are
 Assignment Project Exam Help
- How to keep objects focused, understandable, and https://powcoder.com manageable, and as a side effect, support Low Coupling?
 - Assign responsibilities souther consinging high

OO Design Principles

- Separate aspects of your application that vary from what does not change
- Program to an Anteriface metal Problement of the Help
- Behavior delegation https://powcoder.com
- Composition vs Inheritage WeChat powcoder

 Composition provides a lot of flexibility and change the behavior at runtime (the object you're composing with implements the correct behavior interface)
- Quality of OO designs are evaluated based on reusability, extensibility, and maintainability

Design Patterns Review Assignment Project Exam

Gang of Four Patterns (GoF)

Design Patterns – Classification

Scope / Purpose	Creational	Structural	Behavioral
Class	Factory Method Assignment P	Adapter (class) roject Exam	Interpreter Mate Method
Object	Abstract Factory Builderhttps://po Prototype Singletondd Wec	Composite	Iterator

Design Patterns — Classification

Describes of 23 design patterns

- Creational patterns
 Assignment Project Exam Help
 Abstract the instantiation process

 - Make a system independent of how its objects are created, composed and represented
- Structural patternsdd WeChat powcoder
 - How classes and objects are composed to form larger structures
- Behavioral patterns
 - Concerns with algorithms and the assignment of responsibilities between objects

Selecting Appropriate Design Pattern

- Consider how design pattern solve a problem
- Read through Each pattern's intent to find relevant ones Assignment Project Exam Help
- Study the relationship between design patterns https://powcoder.com
- Study patterns of like purpose (similarities and differences)
 Add WeChat powcoder
- Examine a cause of redesign (what might force a change to a design? Tightcoupling, difficult to change classes
- Consider what should be variable in your design (see table in next slides)

Design Aspects Can be Varied by Design Patterns

Purpose	Pattern	Aspects that can change
Creational	Prototype	families of product objects how a composite object gets created cubcles subject that is instantiated class of object that is instantiated sthe spleinstance of a class m
Structural	Adapter Bridge Composite Decorator Façade Flyweight Proxy	interface to an object implementation of an object structure and composition of an object responsibilities of an object without subclassing interface to a subsystem storage costs of objects how an object is accessed; its location

Design Aspects Can be Varied by Design Patterns

Purpose	Pattern	Aspects that can change
Behavioral	Chain of Responsibility Command Interpreter SSIgnme Iterator Mediator Memento Observer	object that can fulfill a request when and how a request is fulfilled grammar the interpretation of a darguage how an aggregate's elements are accessed, traversed how and which bijects interact with each other what private info. is stored outside an object, & when number of objects that depend on another object; how the states of an object an algorithm steps of an algorithm
	Visitor	operations that can be applied to object(s) without changing their class(es)

Creational Patterns

Assignment Project Exam H

https://powcoder.com

Add WeChat po

Creational Patterns

- Abstract the instantiation process
- Make a system independent of how its objects are created, composed and Assignment Project Exam Help
 Class creational pattern uses inheritance to vary the class that's instantiated

 - Object creational pattern delegates instantiation to another object
- Becomes more important as systems evolve to depend on object composition than class inheritance Add WeChat powcoder
 Provides flexibility in what gets created, who creates it, how it gets created
- and when
 - Let you configure a system with "product" objects that vary in structure and functionality

Creational Patterns

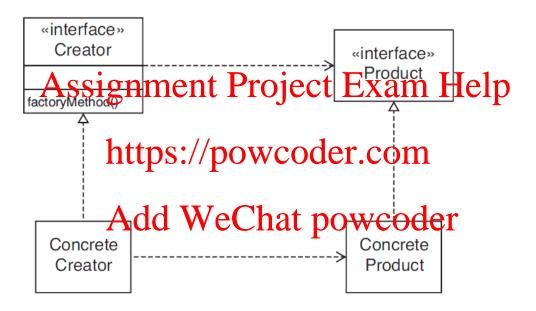

Pattern Name	Description
Abstract Factory	Provide an interface for preating families of related on dependent objects without specifying their concrete classes
Singleton	Ensure a class only has one instance, and provide global point of access to it https://powcoder.com Define an interface for creating an object, but let sub-class decide which
Factory Method	
Builder	class to instantiate (class instantiation deferred to subclasses) Separate the construction of a complex object from its representation so that the same construction process can create different representations
Prototype	Specify the kinds of objects to create using a prototype instance, and create new objects by copying this prototype

See Additional Review Slides: https://canvas.sydney.edu.au/courses/14614/pages/lecture-review-of-design-patterns?module_item_id=437271

Factory Method

- Intent
 - Define an interface for creating an object, but let subclasses decide which class to instantiate Let inclass defer pstantiation to subclasses per pstantiation to instantiate let inclass defer pstantiation to instantiate let include the subclasses decide which class
- Also known as
 - Virtual Constructor https://powcoder.com
- Applicability
 - A class cannot antigodie the class legiects it must create
 - A class wants its subclasses to specify the objects it creates
 - Classes delegate responsibility to one of several helper subclasses, and you
 want to localize the knowledge of which helper subclass is the delegate

Factory Method Pattern - Structure

Factory Method Pattern - Participants

Product

- Defines the interface of objects the factory method creates
- ConcreteProdessignment Project Exam Help
 - Implements the Product interface
- Creator https://powcoder.com
 - Declares the factory method, which returns an object of type Product. Creator may also define a default implementation of the factory method that returns a default ConcreteProduct object
 - May call the factory method to create a Product object

ConcreteCreator

Overrides the factory method to return an instance of a Concrete Product

https://powcoder.com

Add WeChat

Object Creational

Abstract Factory Pattern

- Intent
 - Provide an interface for creating families of related or dependent objects without specifying their concrete classes
 Assignment Project Exam Help
- Also known as
 - Kit

https://powcoder.com

- Applicability
 - A system should be independent of how its products are created, composed and represented
 - A system should be configured with one of multiple families of products
 - Family of related product objects is designed to be used together and you need to enforce this constraint
 - You want to provide a class library of products, and you want to reveal just their interfaces, not their implementation

AbstractFactory Client **Abstract Factory** +CreateProductA() +CreateProductB(- Structure AbstractProductA Assignment Project toxcredifactory1 (m) q ele actory2 +CreateProductA() +CreateProductA() +CreateProductB() +CreateProductB() Add WeChat powcoder AbstractProductB

The University of Sydney Page 55

ProductB1

ProductB2

Abstract Factory Pattern – Participants

AbstractFactory

- Declares an interface for operations that create abstract product objects

- ConcreteFactoAssignment Project Exam Help

- Implements the operations to create concrete product objects

- AbstractProduct https://powcoder.com

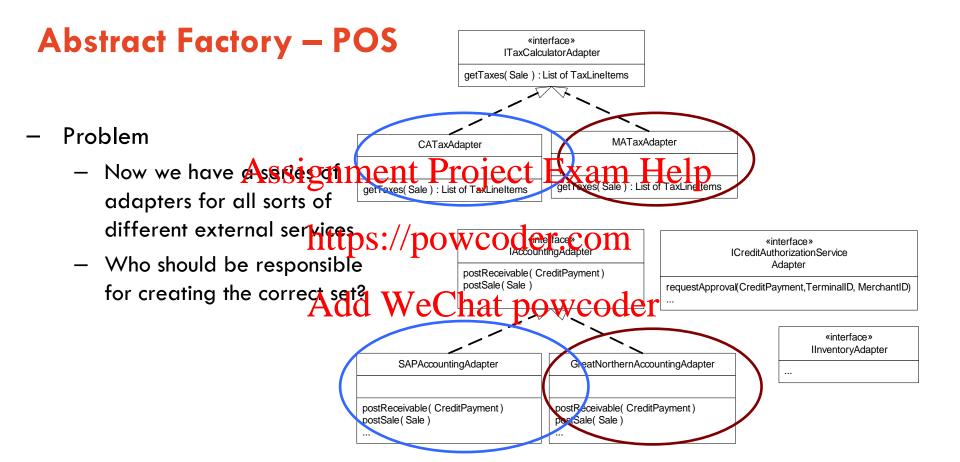

- declares an interface for a type of product object

- ConcreteProduct Add WeChat powcoder

- defines a product object to be created by the corresponding concrete factory
- Implements the AbstractProduct interface

Client

uses only interfaces declared by AbstractFactory and AbstractProduct classes.

Abstract Factory – POS

- Suppose the POS is deployed in some stores in MA, we'll need
 - MATaxAdapter, GreatNprthenAccountingAdapter, ...
 ASSIGNMENT Project Exam Fielp
- If it is deployed intops: wooder.com
 - CATaxAdapter, SAPAccountingAdapter Add WeChat powcoder

Abstract Factory - POS

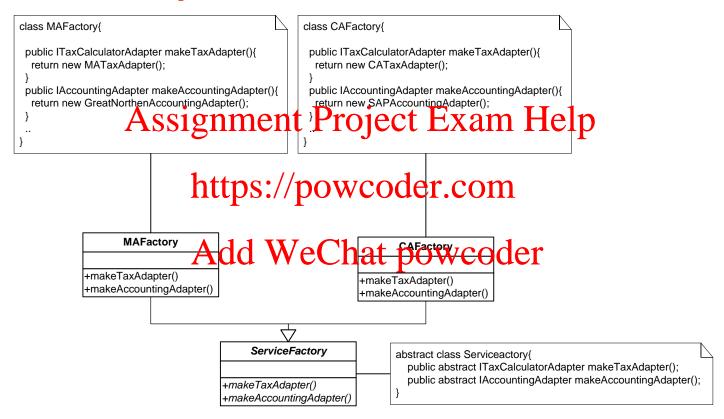

- We need several factory objects each will be responsible for creating a set of objects
 - Assignment Project Exam Help

 A MAFactory which will create MATaxAdapter,

 GreatNorthemAccountingAdapter and so on

 https://powcoder.com
 - A CAFactory which will create CATaxAdapter, SAPAccountingAdapter and so on Add WeChat powcoder
 - Naturally we'll have an abstraction which is an Abstract Factory

Abstract Factory – POS

Abstract Factory - Structure (NextGen POS

The University of Sydney Page 61

AbstractProduct classes

Other Creational Patterns

Pattern Name	Description
Abstract Factory	Provide an interface for creating families of related or dependent objects without specifying their encrete classes x am Help
Singleton	without specifying their project Exam Help Ensure a class only has one instance, and provide global point of access to it
Factory Method	Define an interface to proving an expecting and the class to instantiate (class instantiation deferred to subclasses)
Builder	Separate the donstruction of a complex object from its representation so that the same construction process can create different representations
Prototype	Specify the kinds of objects to create using a prototype instance, and create new objects by copying this prototype

See Additional Review Slides: https://canvas.sydney.edu.au/courses/14614/pages/lecture-review-of-design-patterns?module_item_id=437271

Structural Patterns

Assignment Project Exam H

https://powcoder.com

Add WeChat po

Structural Patterns

- How classes and objects are composed to form larger structures
- Structural class Aposting 1410 in the project of the property of the propert

https://powcoder.com

- Structural object patterns describe ways to compose objects to realize new functionality
 - Add WeChat powcoder
 The flexibility of object composition comes from the ability to change the composition at run-time

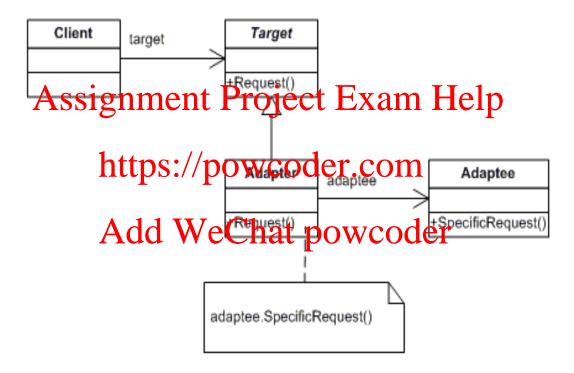

Structural Patterns (GoF)

Pattern Name	Description
Adapter	Allow classes of incompatible interfaces to work together. Convert the interface of a class into another interface clients expect.
Façade	Provides a unified method second interfaces in desupsystem. Defines a higher-level interface that makes the subsystem easier to use.
Composite	Compose objects and compositions of objects uniformly
Proxy	Provide a placeholde word to be to b
Decorator	Attach additional responsibilities to an object dynamically (flexible alternative to subclassing for extending functionality)
Bridge	Decouple an abstraction from its implementation so that the two can vary independently
Flight weight	Use sharing to support large numbers of fine-grained objects efficiently

Adapter

- Intent
 - Convert the interface of a class into another interface clients expect
 - Lets classe Avgrigt parter (that cojulate the part incompatible interfaces
- Applicability https://powcoder.com
 - To use an existing class, and its interface does not match the one you need
 - You want to create a deus the dats that cooperate with unrelated or unforeseen classes, i.e., classes that don't necessarily have compatible interfaces
 - Object adapter only to use several existing subclasses, but it's unpractical to adapt their interface by sub-classing every one. An object adapter can adapt the interface of its parent class.

Object Adapter – Structure

Adapter – Participants

- Target
 - Defines the domain-specific interface that Client uses
- Collaborates with objects conforming to the Target interface. Client
- Adaptee https://powcoder.com
 - Defines an existing interface that needs adapting.
- Adapter Add WeChat powcoder
 - Adapts the interface of Adaptee to the Target interface
- Collaborations
 - Clients call operations on an Adapter instance. In turn, the adapter calls Adapted operations that carry out the request

Object Adapter – Consequences

- Lets a single Adapter work with many Adaptees i.e., the Adaptee itself and all of its subclasses (if any). The Adapter can also add functionality to all Adaptees at once Assignment Project Exam Help
- Makes it harder to override Adaptee behavior. It will require sub-classing adaptee and making Adapter refer to the subclass rather than the Adaptee itself

Add WeChat powcoder

Adapter in POS – Requirements

Next Gen PoS system needs to Process Sale alternate notation for communicate with several external Project Examine third-party services Ignment Project Examine a computer Payment system acto Authorization «actor» Process Renta Tax Calculate - Tax calculators, creatters:/powcoder.com «actor» Cash In Accounting System Sales Activity services, inventory systems, System «actor» Analyze Activity accounting systems. Add WeChat powcoder security systems. System Manage Users Administrator use case Each has a different API and can not . . . be changed.

system boundary

NextGen

Outside the system boundary

and developed and maintained by third parties

communication

Adapter in POS – Reality

- Consider the TaxCalculator services
- Suppose the POSSY ign mile that in the period of the winth of the period of the peri
 - Each state has its own way of calculating and collecting tax
 - California: 8.5% topolimos to the California of the California o
 - Mass: 5% on most items except grocery
 - Add WeChat powcoder
 Each state has its own TaxCalculator service (as a jar perhaps)
 - California API: List getTaxes (List allItem)
 - Mass API: Set computeTaxes (Set allItem)

Requirements – Business Rules

- Business rule (domain rule)

 - Dictate how a domain or business may operate

 Not restricted signmental project Exam Help
 - May apply to many applications in the same domain
 - Company policies https://apontugoelenee.com
- Example:

Add WeChat powcoder						
ID	Rule	Changeability	Source			
RULE1	Tax rules. Sales require added taxes. (POS domain)	High. Tax laws change annually, at all government levels	law			

Adapter in POS – First Attempt

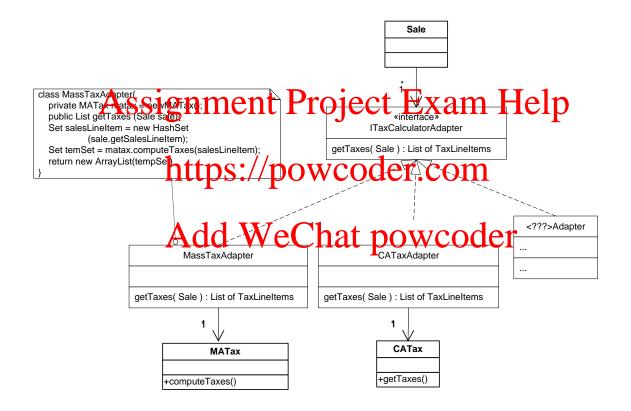

Novice (straightforward) design of Sale.getTaxes method

```
List getTaxes () Assignment Project Exam Help
   switch (state) {
       CATAX CATAX = https://powcoder.com
    case CA:
        List taxlineitem = catax.getTaxes (lineItems);
        break:
                    Add WeChat powcoder
    case MA:
        MATax matax = new MATax():
        List taxlineitem = new ArrayList(matax.computeTaxes (
        new HashSet(lineItems))); // type conversion required
        break:
```

Adapter in POS – Solution

- How to make the Sale object decoupled from detailed Tax Calculation services
 - Reason: Sale is interested in getting the tax for each tax the item, not how taxes are calculated in different states
 - Solution: https://powcoder.com
 - Sale defines an interface to get results on taxes
 - ITAXCalcAlater Weethat powcoder
 - Any Tax Calculation Service that does not use this interface needs to find a interpreter (Adapter) to do the translation
 - MassTaxAdapter, CATaxAdapter

Adapter in POS – Solution

The new Sale class

```
List taxLineItem;

... Assignment Project Exam Help
List<TaxLineItem> getTaxes () {

ITaxCalculatorAdapter/tca = coder.com
return tca.getTaxes(this);

Add WeChat powcoder
}
```

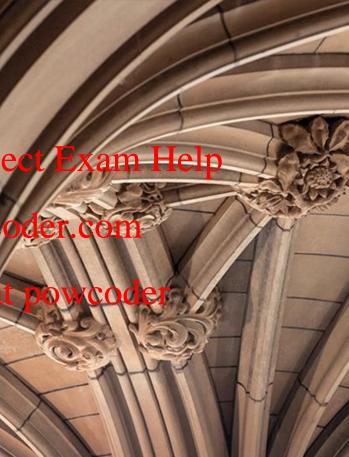

Façade Pattern

Assignment Project Exam H

https://powcoder.com

Add WeChar

Object Structural

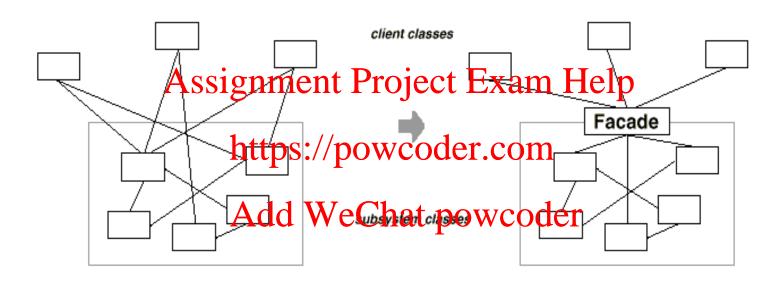

Façade Pattern

- Intent
 - Provide a unified interface to a set of interfaces in a subsystem. It defines a higher-level interface that make the judgy tem ansie Helis
- Applicability https://powcoder.com

 - You want to provide a simple interface to a complex subsystem

 - There are many dependencies between clients and the implementation classes of an abstraction Add Wechat powcoder
 - You want to layer your subsystem. Façade would define an entry point to each subsystem level

Façade Motivation

A **facade** object provides a single, simplified interface to the more general facilities of a subsystem

Façade - Structure

Façade – Participants

Facade

- Knows which subsystem classes are responsible for a request.
- Delegates client requests to appropriate subsystem objects.

 ASSIGNMENT Project Exam Help
- Subsystem classes
 - Implement subsystem functionality.
 - Handle work assigned by the Facade object. COM
 - Have no knowledge of the facade; they keep no references to it. Add WeChat powcoder

Collaborations

- Clients communicate with the subsystem by sending requests to Façade, which forwards them to the appropriate subsystem object(s).
 - Although the subsystem objects perform the actual work, the façade may have to do work of its own to translate its interface to subsystem interfaces
- Clients that use the facade don't have to access its subsystem objects directly

Consequences

- Simplify the usage of an existing subsystem by defining your own interface
- Shields clients from subsystem components, reduce the number of objects that clients deal with and make lightness that clients
- Promote weak coupling the sylpsystem and the clients
 - Vary the components of the subsystem without affecting its clients
 - Reduce compilation dependencies (esp. large systems) when subsystem classes change Add Wechat powcoder
- Does not prevent applications from using subsystem classes if they need to. Choice between ease of use and flexibility.

Façade – NextGen POS

- Pluggable business rules in POS (iteration 2 requirements)
- Consider rules that might invalidate on action at certain point When a new sales is created:
 - - Business rule 1: if it will be paid by a gift card, only one item is allowed to be purchased. Invalidate all requests of entering another item.
 - When a payment in a by by diffit tentificated er
 - Business rule 2: balance should due back in another gift certificate. Invalidate all requests of giving customer change either in cash or credit card.

Façade - NextGen POS Business Rules

Each store that would deploy PoS system will have different business rules implemented differently

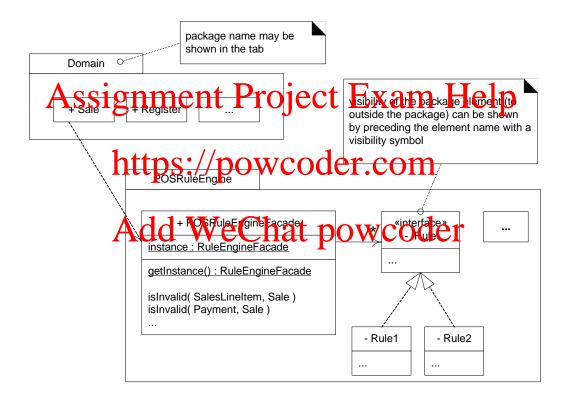

Assignment Project Exam Help

- Not desirable to scatter the implementation of business rules all over the system
 - Consequence: for each installation of POS system, need to modify lots of classes
- We want a design that has low impact on the existing software components.
 Factor out all rules in a separate subsystem to localize the change.

Façade in POS system

- Use an façade object POSRuleEngineFacade to communicate with the business rule subsystem
- Façade object Assignment Predes Singleton Help

Façade – NextGen POS

Façade – NextGen POS

- Façade is always used to separate different tiers of a system
 - The Façade Site of the Francisco F
 - We also use Façade to control the communication between domain layer and data layer. Add WeChat powcoder

Structural Patterns (GoF)

Pattern Name	Description
Adapter	Allow classes of incompatible interfaces to work together. Convert the interface of a class into another interface clients expect.
Façade	Provides a unified interface to a set of interfaces in a subsystem Defines a higher-level interface that makes the subsystem easier to use.
Composite	Compose objects and compositions of objects uniformly
Proxy	Provide a placeholden for another poject to control access to it Add Wechat powcoder
Decorator	Attach additional responsibilities to an object dynamically (flexible alternative to subclassing for extending functionality)
Bridge	Decouple an abstraction from its implementation so that the two can vary independently
Flight weight	Use sharing to support large numbers of fine-grained objects efficiently

See Additional Review Slides: https://canvas.sydney.edu.au/courses/14614/pages/lecture-review-of-design-patterns?module_item_id=437271

Behavioural Design Assignment Project Exam Help

https://powcoder.com

Add WeChat powcoder

Behavioural Patterns

- Concerned with algorithms and the assignment of responsibilities between objects
- Describe patterns of objects and class, and communication between them ASSIGNMENT Project Exam Help
- Simplify complex control flow that's difficult to follow at run-time
 - Concentrate on the watt pose of positive condetectom
- Behavioural Class Patterns
 - Use inheritance to distribute behavior between classes (algorithms and computation)
- Behavioural Object Patterns
 - Use object composition, rather inheritance. E.g., describing how group of peer objects cooperate to perform a task that no single object can carry out by itself

Behavioural Patterns (GoF)

Pattern Name	Description
Strategy	Define a family of algorithms, encapsulate each one, and make them interchangeable (let algorithm vary independently from clients that use it)
Observer	Define SS1g-ham cependenty Oje Cet Extantial Went pe object changes, all its dependents are notified and updated automatically
Memento	Without violating encapsulation capture and externalize an object's internal state so that the object can be restoled to this state later
Command	Encapsulate a request as an object, thereby letting you parameterize clients with different requests, queue cold requests, and supplications
State	Allow an object to alter its behaviour when its internal state changes. The object will appear to change to its class
Visitor	Represent an operation to be performed on the elements of an object structure. Visitor lets you define a new operation without changing the classes of the elements on which it operates

Behavioural Patterns (GoF)

Pattern Name	Description	
lterator	Provide a way to access the elements of an aggregate object sequentially without exposing its underlying representation	
State	Allowans significantly was testing and the change to its class	
Interpreter	Given a language define a representation for its grammar along with an interpreter that uses the representation to interpret sentences in the language	
Visitor	Represent an operation to be performed on the elements of an object structure. Visitor lets you define a new operation who changing the live of the flements on which it operates	
Other patterns; Chain of responsibility, Command, Mediator, Template Method		

See Additional Review Slides: https://canvas.sydney.edu.au/courses/14614/pages/lecture-review-of-design-patterns?module_item_id=437271

https://powcoder.com

Add WeChar

Object behavioural

Strategy

- Intent
 - Define a family of algorithms, encapsulate each one, and make them interchangeable
 - Let the algorithmicaten Penty con Fixnama Help
- Known as
 - Policy

https://powcoder.com

Motivation

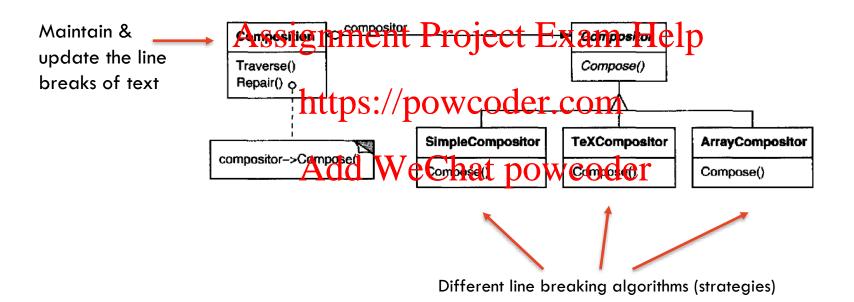

- Add WeChat powcoder
- Design for varying but related algorithms
- Ability to change these algorithms

Strategy - Example (Text Viewer)

- Many algorithms for breaking a stream of text into lines
- Problem: hard Assignment Broke to Exemple that require them
 - More complex and harder to maintain clients (more line breaking algorithms)
 - Not all algorithms will be needed at all times

Add WeChat powcoder

Strategy - Example (Text Viewer)

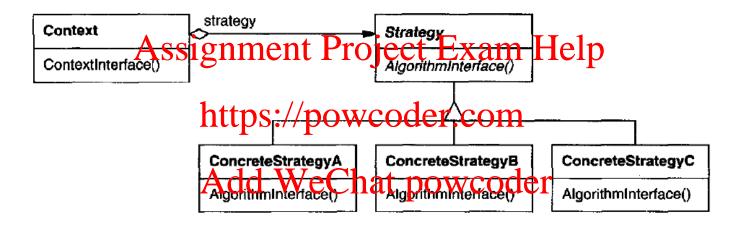

Strategy - Applicability

- Many related classes differ only in their behavior
- You need different variant of an algorithm Exam Help
- https://powcoder.com
 An algorithm uses data that should be hidden from its clients

Add WeChat powcoder

A class defines many behaviors that appear as multiple statements in its **operations**

Strategy – Structure

Strategy - Participants

Participant	Goals
Strategy (Compositor)	Declares an interface commento all supported algorithms Light Help Seed by context to call the algorithm defined by ConcereteStrategy
ConcereteStrategy (SimpleCompositor, TeXCompositor, etc)	https://powcoder.com Implements the algorithm using the Strategy interface Add WeChat powcoder Is configured with a ConcereteStrategy object
Context (Compositoion)	Maintains a reference to a Strategy object May define an interface that lets Strategy access its data

Strategy - Collaborations

- Strategy and Context interact to implement the chosen algorithm
 - A context may pass all data required by the algorithm to the Strategy
 - The context can pass itself as an argument to Strategy operations ASSIGNMENT Project Exam Help
- A context forwards requests from its clients to its strategy
 - Clients usually create and pass a Concrete strategy object to the context;
 thereafter, clients interact with the context exclusively

Add WeChat powcoder

Strategy - Consequences (Benefits)

- Family of related algorithms (behaviors) for context to reuse
- Alternative to Alsesiment Project Exam Help
 Why not sub-classing a Context class directly to give it different behaviors?

https://powcoder.com
Strategies eliminate conditional statements

Add WeChat powcoder

Provide choice of different implementation of the same behavior

Strategy - Consequences (Drawbacks)

- Clients must be aware of different strategies
 - Understand how strategies differ

Assignment Project Exam Help

- Communicate overhead between Strategy and Context
 - Strategy interface ist those place in the algorithms they implement are trivial or complex

Add WeChat powcoder

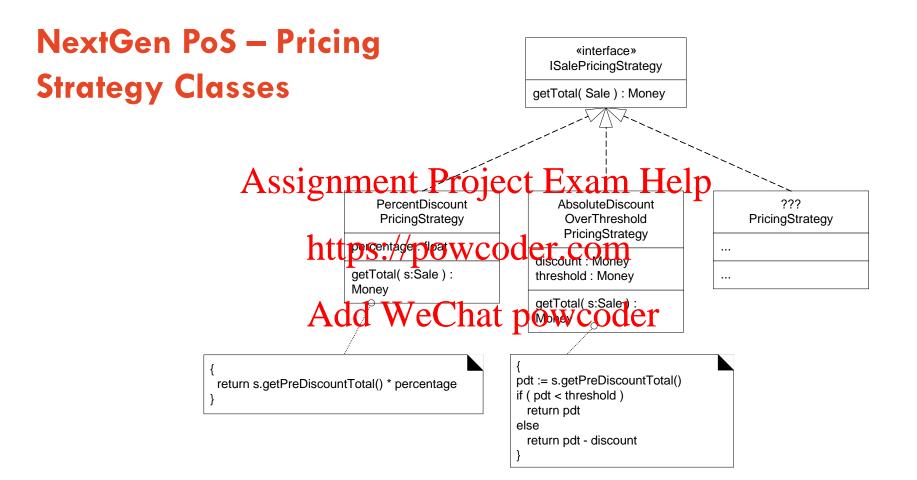

- Increased number of objects in an application
 - Can be reduced by implementing strategies as stateless objects that context can share
 - Strategy objects often make good flyweight (sharing strategies)

Strategy - NextGen PoS System

 Design problem: how to provide more complex pricing logic, e.g., storewide discount for the day, senior citizen discounts

Assignment Project Exam Help

- The pricing strategy (or policy) for a sale can vary:
 - 10% of all sales dynings: printing of the sales dynings of the sales d
 - \$10 off if the total sale is greater than \$200
 - Other variations Add WeChat powcoder
- How do we design our system to accommodate such varying pricing policies?

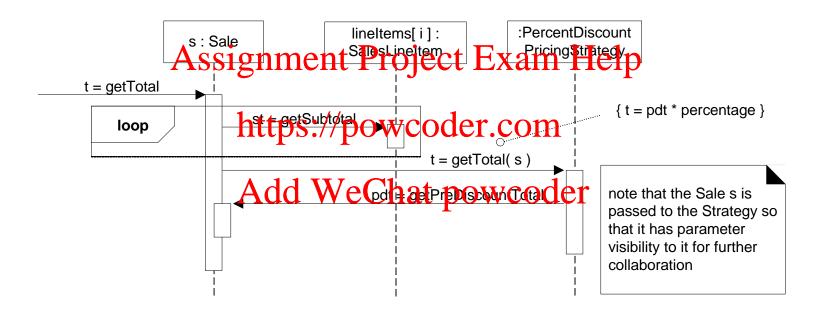

Strategy Pattern - NextGen PoS System

Create multiple SalesePricingStrategy classes, each with a polymorphic getTotal method

Assignment Project Exam Help

- Each getTotal method takes the Sale object as a parameter
 - The pricing strategy to bject can find the tree discount price from the Sale, and they apply the discounting policy
- The implementation of each get lotal method will be different
 - E.g., PercentDiscountPricingStrategy will discount by a percentage

PoS System - Strategy POS Collaboration

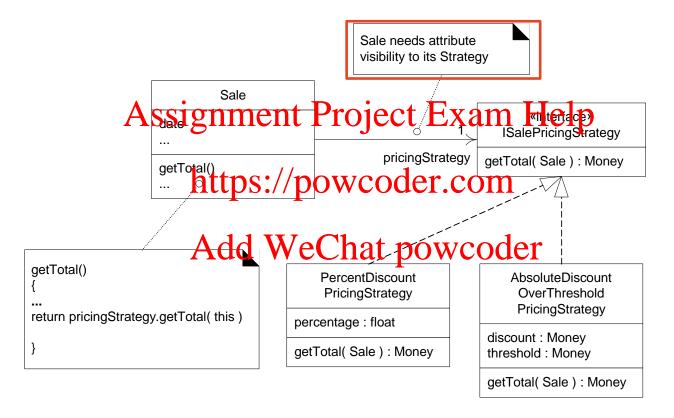

PoS System - Strategy POS Collaboration

- A strategy is attached to the Sale object (context object)
- The Sale object design enter enter the sale object object
 - The message to the context and strategy objects is not required to be the same (e.g., getTotal) (e.g., getTotal) https://powcoder.com

 - The Sale object passes a reference to itself on to the strategy object

Add WeChat powcoder

PoS System – Attributes Visibility

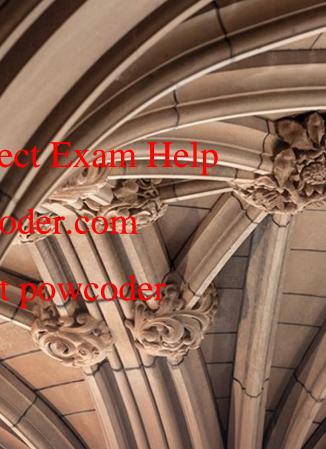

Observer

Assignment Project Exam H

https://powcoder.com

Add WeChar

Object Behavioural

Observer Pattern

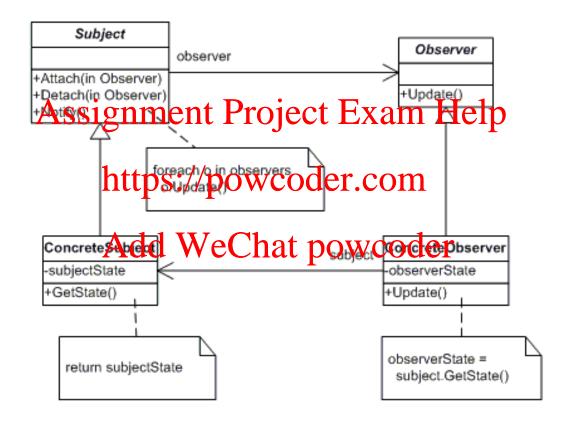

- Intent: define a one-to-many dependency between objects so that when one object changes state, all its dependents are notified and updated automatically
- Known as: Dependents, Publish-Subscribe ASSIGNMENT Project Exam Help
- Motivation:
 - Partitioning a system into a collection of cooperating classes help to maintain consistency between related objects Add WeChat powcoder
 - How to achieve consistency while maintaining classes loosely-coupled, and highly reusable?

Observer Pattern – Applicability

- When an abstraction has two aspects, one dependent on the other. Encapsulating these aspects in separate objects lets varying and using them independently
- When a change Assing the trade of the trad objects need to be changed

https://powcoder.com
When an object should be able to notify other objects without making assumptions about who these objects are (keep these objects loosely-coupled) Add WeChat powcoder

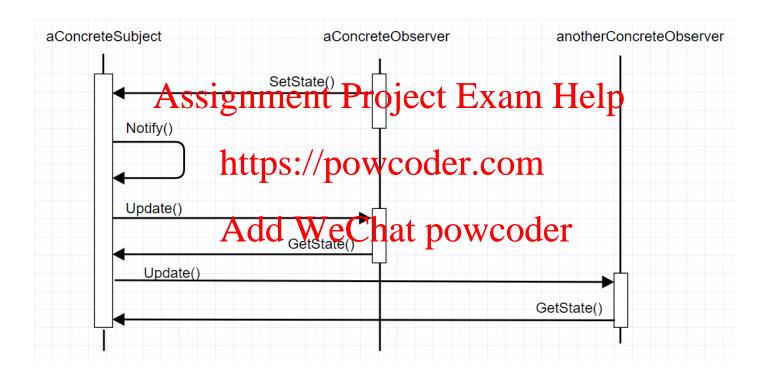

Observer Pattern - Structure

Observer Pattern – Participants

Participant	Goals
Subject	knows its observers, any number of Observer objects may observe a subject Provides on interface for appeling and detaching Observe bejects
Observer	defines an updating interface for objects that should be notified of changes in a subjective subjection of the subjectio
ConcereteSubject	Stores state of interest to Concerete Observer objects Sends notifications to its observers when its state changes
ConcreteObserver	Maintains a reference to a ConcereteSubject object Stores state that should stay consistent with the subject's Implemenets the Observers updating interface to keep its state consistent

Observer Pattern - Collaborations

Observer Pattern - Consequences/Benefits

- Abstract coupling between Subject and Observer
- Support for broadcast communication
 - Notifications are broadlasted/approximally the first part interpret objects that subscribe to the Subject
 - Add/remove Observers anytime Add WeChat powcoder
- Unexpected updates
 - Observers have no knowledge of each other's presence, so they can be blind to the cost of changing the subject
 - An innocent operation on the subject may cause a cascade of updates to Observers and their dependents

Observer Pattern – PoS System

- PoS system requirement (iteration 2):
 - A GUI window to refresh its display of the Sale total when the total changes
 - In next iterations; extend the solution to refreshing the GUI display for other changing data

 ASSIGNMENT Project Exam Help

Discuss the following solulidates://powcoder.com

When the Sale object changes it to whether the Sale object changes it to whether the sale object changes it is to what it is what it is to what it is what it is what it is to what it is what it is wh the Sale object sends a message to a window (GUI), asking it to refresh its display

changes, refresh the display with the new value Sale b total setTotal(newTotal)

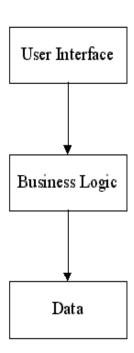

Goal: When the total of the sale

Observer in POS

- Problem of the naïve solution

 - Violation of layer dependency principle
 Assignment Project Exam Help
 Specially, violate the Model-View Separation principle
- https://powcoder.com
 - Do not connect or couple non-Ul objects directly to Ul objects

 Add We Chat powcoder objects
 - Do not put application logic in the UI object methods.
- We also want it flexible to plug/unplug certain UI objects.

Observer Pattern - PoS System

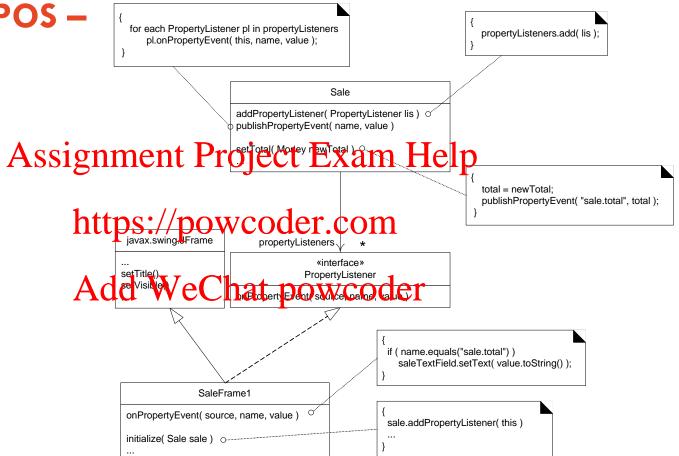

- Model-view separation principle (low-coupling of model and Ul layers)

Assignment Project Exam He

- "model" (e.g., Sale object) should not know/update "view" presented objects (e.g., window)

- Allows replacing (or Example of the sale changes, refresh the display with presented of the sale changes, refresh the display with presented object of the sale changes, refresh the display with presented object of the sale changes, refresh the display with presented object of the sale changes, refresh the display with presented object of the sale changes, refresh the display with presented object object

Observer in POS – Solution

Observer in POS - Solution

- An interface is defined PropertyListener with the operation onPropertyEvent
- Define an UI object to implement the interface Exam Help
- When the SalesFrame https://spanicologicalsscromsale instance from which it is displaying the total
- The SaleFrame1 window registers or subscribes to the Sale instance for notification of "property events", via the addPropertyListener message.
- The Sale instance, once its total changes, iterates across all subscribing
 PropertyListeners, notifying each

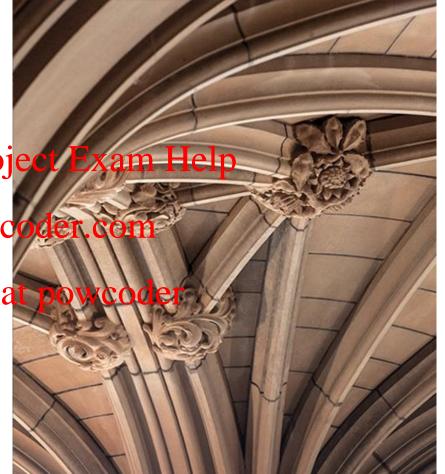

Command Design Pattern

Assignment Project Exam

https://powcoder.com

Add WeChat

Object Behavioural

Command Pattern

Intent

- Encapsulate a request as an object, thereby letting you parameterize clients with different sequential an object, thereby letting you parameterize clients with different sequential and the sequential a

Applicability

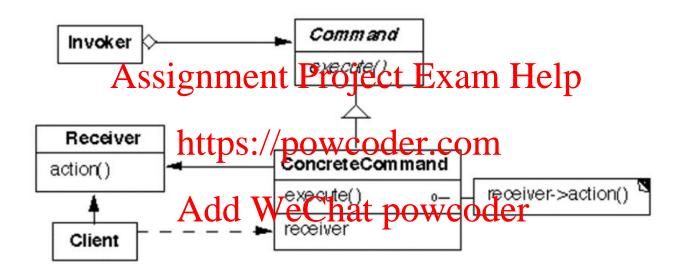

- To parameterize objects / apolitical functions
- To specify, queue and execute requests at different times
 - A command object and the original request
- To support undo
 - The Command's Execute operation can store state for reversing its effects in the command itself

Command Pattern - Applicability

- To support logging changes so it can be applied in case of a system crash
 - Load and Store operations in the Command interface to keep a persistent log of change Assignment Project Exam Help
- To structure a system teresum thigh teresum to built on primitive operations
 - E.g., transaction systems mountain set of changes to that a
 - Commands have a common interface, you can invoke all transactions the same way

Also can extend the system with new transactions

Command Pattern - Structure

Command – Structure (Participants)

Command

- Declares an interface for executing an operation
- ConcreteCommandilentelemphone i en Eanmand I elp
 - Defines a binding between a Receiver object and an action
 - Implements Execute by invoking the carresponding operation(s) on Receiver
- Client (Application)
 - Creates a Concrete Activative Letter and sets its rectiver
- Invoker (Menultem)
 - Asks the command to carry out the request
- Receiver

- Knows how to perform the operations associated with carrying out a request

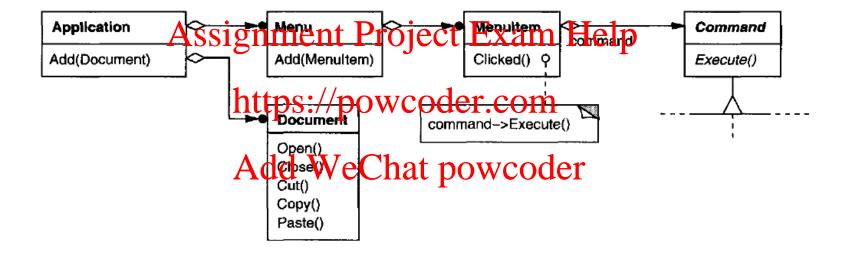

Command – Toolkits User Interface Example

 Consider a user interface toolkits that include objects like buttons and menus that carry out a request in response to user input

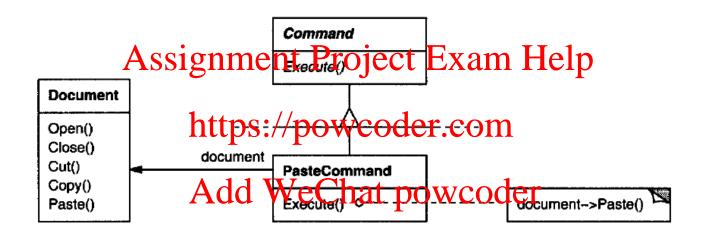

- Assignment Project Exam Help

 The toolkit cannot implement the request in the button or menu objects; applications that use the toolkit know what should be done on which object
- Requests will be issued to objects without knowing anything about the operation being requested of the receive of the receiv

Command - Example

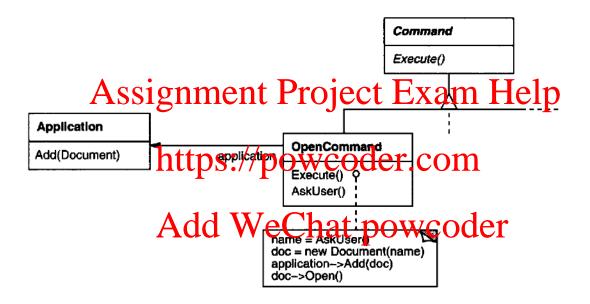

Command – Toolkit (Paste Command)

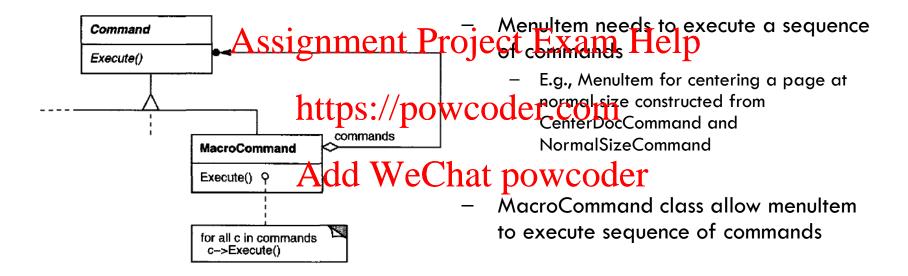

PasteCommand allows pasting text from the clipboard into a document

Command - Toolkit (Open Command)

OpenCommand's Execute operation

Command - Toolkit (Sequence of Commands)

Behavioural Patterns (GoF)

Pattern Name	Description
lterator	Provide a way to access the elements of an aggregate object sequentially without exposing its underlying separate Project Exam Help
State	Allow an object to alter its behaviour when its internal state changes. The object will appear to change to its classifications://powcoder.com
Interpreter	Given a language, define a representation for its grammar along with an interpreter that uses
Visitor	the representation to interpret sentences in the language. Represent an operation to be performed on the elements of an object structure. Visitor lets you define a new operation without changing the classes of the elements on which it operates
Other patterns; Chain of responsibility, Command, Mediator, Template Method
